PROFESSIONAL SUMMARY

ADIS student with hands-on experience in penetration testing labs, network security, and vulnerability assessment. Familiar with SOC fundamentals including log analysis, SIEM concepts, and MITRE ATT&CK. Practical experience using Nmap, Wireshark, Burp Suite, and Metasploit through structured TryHackMe labs and personal projects. Currently preparing for CompTIA Security+.

TECHNICAL SKILLS

Security Tools: Nmap, Wireshark, Burp Suite, Metasploit, John the Ripper

Operating Systems: Kali Linux, Windows

Security Concepts: Vulnerability Assessment, Privilege Escalation, Log Analysis, SIEM Fundamentals, MITRE ATT&CK

Platforms: TryHackMe, GitHub, Hackthebox

PROJECTS

Rogue USB HID Attack Simulation | 2026

Technologies: Digispark ATtiny85, Kali Linux, MITRE ATT&CK

- Programmed a Digispark microcontroller to emulate a USB keyboard and inject keystrokes, simulating a rogue HID device attack without user interaction.
- Mapped the attack to MITRE ATT&CK techniques T1059, T1200, and T1204, covering insider threat and USB drop attack scenarios.
- Researched defensive controls including USB device restriction policies and EDR-based alerting for keystroke injection behavior.

WinLog Sentinel | 2026

Technologies: Python, Flask, SQLite, Windows Event Logs, MITRE ATT&CK

- Built a web-based platform to ingest and analyze Windows Event Logs, focusing on security-relevant events such as logon activity, privilege use, and process execution.
- Implemented alert generation logic to flag suspicious events and practiced SOC investigation workflows including triage, log correlation, and incident detection.
- Mapped detected event patterns to MITRE ATT&CK techniques to understand attacker behavior and practice threat categorization from a defender's perspective.

Password Strength Analyzer | 2026

Technologies: Python

- Developed a Python tool to assess password strength by evaluating length, character diversity, and common pattern weaknesses.
- Added checks for frequently used and easily guessable passwords to identify credential risks based on standard security policy guidelines.
- Reinforced understanding of authentication security, password policy enforcement, and the role of strong credentials in reducing account compromise risk.

INTERNSHIP

Cybersecurity Intern (Ongoing) | Hackaware | 2026 – Present

- Gaining practical exposure to cybersecurity concepts including security assessment methods, threat awareness, and security operations fundamentals.
- Participating in hands-on training activities covering vulnerability identification, security monitoring concepts, and defensive security practices.
- Developing skills in security documentation and applying structured approaches to analyze and report on security observations.

EDUCATION

Advanced Diploma in Information Security (ADIS) — Expected June 2026

Diploma in Computer Engineering — SBTE Kerala | 2025

CERTIFICATIONS

- CompTIA Security+ — In Progress
